8-Flexibility

Custom-made services that meet your individual situation and specific requirements.

9-Fixed fees

ISO certifications at fixed prices. No hidden costs.

THE CHALLENGE OF SUSTAINABILITY

Environmental protection is becoming increasingly important for organizations. Society, politics, customers and consumers are becoming ever more demanding in their expectations for ecologically sound services, processes and products. Therefore, manufacturers and service providers are being confronted with ever growing challenges. Irrespective of whether these challenges are due to higher cost, insurance, consumers or official regulations, a professional environmental protection management system is the best guarantee to ensure continual improvement and risk reduction.

ISO 14001

THE ENVIRONMENTAL PROTECTION MANAGEMENT SYSTEM DEFINES PROCESSES

ISO 14001 is applicable to any size or type of company and specifies the requirements for the formulation and maintenance of an environmental management system (EMS). Meeting this international standard enables your organization to install a fully integrated and effective EMS that streamlines your operations, leverages time and resources, and improves overall efficiency.

WHY APPLY FOR AN ISO 14001 CERTIFICATION?

If you seek to ...

achieve lasting cost savings in waste, tax burdens, energy costs and insurance premiums,

reduce the risks of environmental liability and regulatory requirements,

if you have environmentally-friendly customers whose procurement depends on the environmental compatibility of your processes and products,

then ISO 14001 certification offers you many advantages. Proof of ISO criteria is not just a piece of paper, it is an essential contribution to optimizing your operational processes and responsibilities.

GERMANCERT's WAY TO PROCEED:

INITIAL SITUATION / STATUS QUO ANALYSIS

Our auditors conduct an analysis of the initial situation. The internal processes, practices and management systems are reviewed. After that, you'll know where your company stands in relation to the requirements of ISO 14001.

AUDITING

Based on the analysis of the status quo, GERMANCERT supports you throughout the entire auditing process with dedication and care.

CERTIFICATE AWARD

Once your organization meets the demands of the Norm ISO 14001 after the audit has been conducted, you will be awarded your ISO certificate.

Your organization benefits from this course of action by:

- increasing customer satisfaction through consistent delivery of services and products;
- reducing operating costs by increasing efficiency with continuous improvement of processes;
- improving competitiveness;
- optimizing your market potential as many procurement specifications include the requirement of certification in order to be able to deliver;
- improving the trust base for employees, customers and suppliers;
- improving risk management;
- increasing profitability and the traceability of activities and processes. This allows to better identify and avoid faults in future.
