and specific requirements.

9-Fixed fees
ISO certifications at fixed
prices. No hidden costs.

QUALITY
AS TOP CHALLENGE

The objective of every Quality Management System is the sustained improvement of the organizational performance as imperative factor to ensure business success.

Even though customers in many industries and sectors demand evidence of a certified Quality Management System, this exigence should by no means be the only reason to adopt such a system.

The systematization, the definition as well as the determination of responsibilities and processes for system and process quality is an intrinsic challenge for every successful organization.

ISO 9001: THE QUALITY MANAGEMENT SYSTEM

ISO 9001 is the authoritative worldwide recognized norm for Quality Management. It is an important tool to improve the success, profitability and market potential of your business.

ISO 9001 provides measurable improvements that encompass your entire performance. GERMANCERT communicate what they do, do what they communicate, and give proof of that.

WHY APPLY FOR AN ISO 9001 CERTIFICATION?

If you seek to ...
• use an important tool to improve your business success;
• achieve higher profitability;
• optimize performance through a structured and flexible organizational system;
• retain clients or win over potential new clients who expect a certified Quality Management System from your organization;
• improve the quality of your services sustainably;
then an ISO 9001 certificate is the key to achieve quality, competitiveness and business success.

GERMANCERT's WAY TO PROCEED:

INITIAL SITUATION / STATUS QUO ANALYSIS

Our auditors conduct an analysis of the initial situation. The internal processes, practices and management systems are reviewed. After that, you'll know where your company stands in relation to the requirements of ISO 9001.

AUDITING

Based on the analysis of the status quo, GERMANCERT supports you throughout the entire auditing process with dedication and care.

CERTIFICATE AWARD

Once your organization meets the demands of the Norm ISO 9001 after the audit has been conducted, you will be awarded your ISO certificate.

Your organization benefits from this course of action by:

- improving customer satisfaction through continuous top-quality service performance;

- reducing operational costs through efficiency enhancement along with continued process optimization;

- increasing competitiveness;

- optimizing your market potential;

- retaining and attracting clients since many organizations have procurement regulations that require their suppliers to be ISO certified;

- gaining better confidence in your organization by employees, clients and suppliers;

- achieving a safer risk management;

- increasing profitability and the traceability of activities and processes. This allows to better identify and avoid faults in future.
